kacperhajdamowicz.com | linkedin.com/in/kacper-hajdamowicz-b1167520b | Available for B2B contracts (registered sole trader)

SUMMARY

Power Platform engineer in Wroclaw, currently contracting with IT-Dev, building apps, automation and AI assistants for external clients in IT, manufacturing and logistics. Six years in the Microsoft stack, the last two on Power Platform: administration and governance, application lifecycle management (ALM) through Azure DevOps and twelve months of delivery inside a regulated bank. C# and Azure Functions for the parts the platform cannot handle on its own.

SKILLS

Power Platform: Power Apps (canvas and model-driven), Power Automate, Dataverse, Power Platform admin center

AI: Microsoft Copilot Studio, Microsoft Foundry, retrieval-augmented generation (RAG), AI Builder

ALM & DevOps: Azure DevOps pipelines, pipelines in Power Platform, pac CLI, Git, managed and unmanaged solutions, solution layers, connection references

Governance: Power Platform administration, data policies (DLP), managed environments, Dev/Test/Prod environment strategy, Microsoft 365 administration, SharePoint, Microsoft Teams, Microsoft Entra

Data: Power BI, DAX, Microsoft Fabric, SQL

Development & integration: C# / .NET, Azure Functions, REST API integration, custom connectors, OAuth, service principals

Ways of working: Agile and Scrum (developer role)

Automation outside Microsoft: n8n, Make.com, Zapier

Languages: English (fluent), Polish (native)

EXPERIENCE

Automation & AI Engineer | IT-Dev

Jul 2026 – Present

B2B contract, external clients

- Three to four client projects at a time; a project typically brings in 2 or 3 project managers as stakeholders.
- Chatbots built in Copilot Studio and Microsoft Foundry sit on a custom RAG implementation and reach up to 100 users in Microsoft Teams and Copilot Chat.
- Canvas and model-driven Power Apps, including performance work on ones already live.
- ALM through pipelines in Power Platform, Azure DevOps and pac CLI; a typical solution carries 10 to 15 Power Automate flows.
- Set data policies (DLP), managed environments and Dataverse security roles for each client.
- Reporting alongside the builds: data models and DAX in Power BI Desktop over Microsoft Fabric.

Power Platform Engineer | UBS (via Hays)

Wroclaw | Jun 2025 – Jun 2026

- Built document classification and routing on Microsoft Foundry, wired into Power Platform and SharePoint, so incoming documents were classified on arrival instead of being sorted by hand.
- Power Apps over Dataverse behind the bank's risk and regulatory processes.
- Structured ALM across 3 environments, Dev, Test and Prod: solution versioning, release management and a share of the deployment automation and release standardization work.
- Enforced governance and data protection standards with the architecture and security teams.
- Contributed to the integration patterns between Power Platform and external systems.
- Tuned automation workflows and app performance.

IT Administrator | Skierski Company

Jan 2025 – Jul 2026

Additional contract alongside main engagement, approx. 40 hours per month; the whole IT function of a small company.

- Security groups in Microsoft Teams and Microsoft Entra, a cleanup and a naming pass over the company's Microsoft 365 groups, plus a written procedure for granting access and templates for new accounts.
- Marketing content moved off SharePoint to a separate OneDrive test account as an extra safeguard, plus fixes on the HR and accounting side.
- Leave requests, timesheets and an equipment register each got their own Power App; the timesheet one later needed scaling fixes.
- Knowledge bot: final tests before handover.

Automation Consultant | AXA XL

Wroclaw | Oct 2024 – May 2025

- An internal HR assistant on Copilot Studio answered employee questions, and Power Automate and SharePoint sat behind its leave requests and policy lookups.
- Approval workflows with full traceability.
- End-to-end automation on Power Platform, scoped together with the business teams that asked for it; on a single process that took up to a few hours a week off the people who ran it.
- Reusable components and standard solution patterns for the next build.
- Kept environment management and the solution lifecycle in order next to the delivery work.

Business Intelligence Developer | Keywords Studios

Katowice | Apr 2024 – Sep 2024

Maternity cover, part-time alongside full-time employment

- Power BI dashboards and reporting for the finance teams over the 6-month cover, plus automation of the workflows that fed them.
- Integrated Power Apps with the backend sources.

Smith & Nephew

Wroclaw | Jul 2020 – Sep 2024

Business Intelligence Developer

Feb 2022 – Sep 2024

- Built the automated reporting pipelines and the analytics on top of them, and the results went to business stakeholders.
- Automation initiatives shared beyond my own team.

Service Desk Agent / Reporting Backup

Jul 2020 – Mar 2022

- Technical support for internal teams, plus the reporting requests I picked up as cover, which is how the next role here began.
